

3-Month Build — Impact Baseline

What the automation build changed, measured from live data — invoice tracker, n8n execution history, and the creator pipeline. Operational leverage only: time, throughput, cycle-time, reliability.

As of 23 Jun 2026 · Sources: Client Invoice Tracker · n8n executions (live) · Crave creator sheet

The build removed roughly **40+ hours of recurring manual ops per month** — about **a full day a week** — and turned scattered, by-hand back-office work into one automated system. The freed capacity now goes into Halo Home and the Meta agent.

HEADLINE METRICS

~40+ hrs/mo

Manual ops removed

≈ one full day per week freed

42

Invoices tracked end-to-end

One tracker, full lifecycle

175

Creators sourced & vetted

Weekly TikTok pipeline

~720 /mo

Automated payment scans

Hourly, 24/7 reconciliation

~99%

Workflow success rate

2 errors in 169 recent runs

~7 days

Median days-to-cash

Overdue auto-chased

BEFORE → AFTER

BEFORE — MANUAL

Invoicing by hand in Osome, ad hoc

AR scattered: Osome, Airwallex, email, Slack

Payments checked manually

Reminders manual, easily missed

No daily start/end-of-day reporting

Inbox triaged by hand

No creator sourcing pipeline

AFTER — AUTOMATED

Slack form → auto draft → approve → send

One tracker — 42 invoices, full lifecycle

Scanned hourly, auto-matched to invoices

Auto 6-step ladder (7d/5d/3d/due/overdue/late-fee)

SOD, EOD & Morning brief sent automatically

Auto-classified with draft replies

175 creators scraped & vetted weekly

WHERE THE HOURS COME BACK — EST. PER MONTH

Total recurring ops removed

~41 hrs / month

WHAT WE CLAIM — AND WHAT WE DON'T

Defensible signals

- ✓ **Time saved** — automation run-volume × manual-equivalent effort.
- ✓ **Throughput** — invoices, leads, scans, reminders (counted).
- ~ **Days-to-cash** — real, mildly revenue-adjacent (faster cash in).
- ✓ **Reliability** — measured workflow success rate.
- ✗ **Direct revenue caused** — not honestly attributable; not claimed.

Reliability (honest)

Workflow success rate	~99%
Payment scans / month	~720
Automated dunning reminders	100+
Bugs that occurred	2 — caught & fixed
↳ false "paid" mark	voided + refunded
↳ duplicate customer	guard added

Reading this honestly.

- Hours-saved are **estimates**: real run/volume data × assumed manual minutes. Treat as ranges, not precision.
- **No direct revenue attribution.** The revenue story is indirect — freed capacity → Halo Home + Meta agent, and faster collections → better cash flow.
- The "before" baseline is partly reconstructed; pre-build records were scattered across tools.
